

## 6. Bootstrap Labels and Badges

<http://getbootstrap.com/components/#labels>

Labels and badges are things you add to the end of text and other components. You can add a warning label to a link, or even a badge that states the number of emails a user has in their inbox on a button.

To add a simple default label to a header, simply add a span with the appropriate classes, like so:

```
1 <h3>Example heading <span class="label  
2 label-default">New</span></h3>
```

This code will output the following:

**Example heading** **New**

In fact, the styles for labels are almost exactly the same as the button CSS we went over earlier! Here are all the styles:

```
1 <span class="label label-default">Default</span>  
2 <span class="label label-primary">Primary</span>  
3 <span class="label label-success">Success</span>  
4 <span class="label label-info">Info</span>  
5 <span class="label label-warning">Warning</span>  
6 <span class="label label-danger">Danger</span>
```

And this is what it will output:

**Default** **Primary** **Success** **Info** **Warning** **Danger**

Additionally, badges with content following components are possible, too. For example, the following code is an example of badges:

```
1 <a href="#">Inbox <span class="badge">42</span></a>  
2  
3 <button class="btn btn-primary" type="button">  
4   Messages <span class="badge">4</span>
```

```
5 </button>
6
```

This code will output the following:

Inbox 42

Messages 4

Notice how, within the blue button, the label turns white and blue, rather than the default gray and white.

## Exercises

### Exercise 1

Add labels and badges to every component within your newly created Bootstrap site with the navigation bar, etc. that you feel would make your webpage look nicer.
