

5. Bootstrap Thumbnails and Cards

<http://getbootstrap.com/components/#thumbnails>

Thumbnails, or cards, are essentially clickable images that are Bootstrap-formatted. You can add some extra markup to add some interesting things, such as a title and some text content.

```
1 <div class="row">
2   <div class="col-md-3">
3     <a href="#" class="thumbnail">
4       
5     </a>
6   </div>
7   ...
8 </div>
```

This will give one thumbnail. Thumbnails work similarly to Bootstrap's grid system. You can generally add anything within the `<a>` tag, though thumbnails work best with images.

More thumbnails can be added by adding more column div tags as if it were a Bootstrap grid. More than one with a filler image would result in this (as seen on the official Bootstrap website):

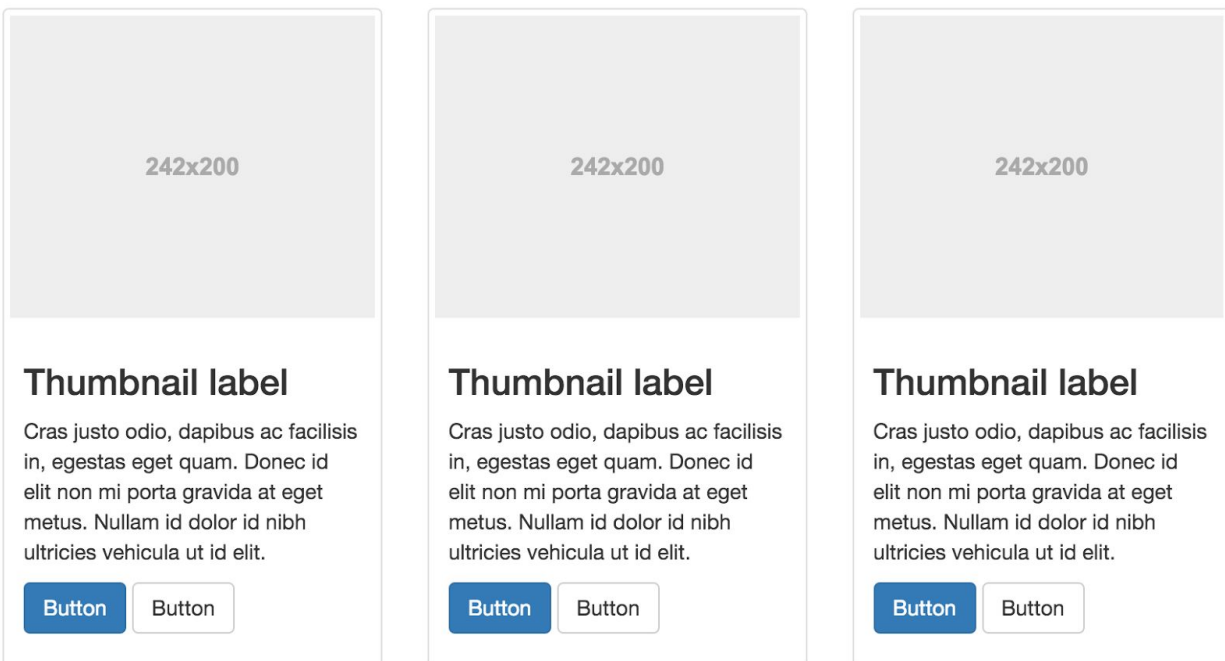

In fact, if you hover over one...

As mentioned before, you can add extra components, including titles and descriptions to each thumbnail like so:

```
1 <div class="row">
2   <div class="col-md-4">
3     <div class="thumbnail"> <!--Changed into div - won't be a
4 clickable link-->
5       
6       <div class="caption">
7         <h3>Thumbnail label</h3>
8         <p>...</p>
9         <p><a href="#" class="btn btn-primary"
10 role="button">Button</a> <a href="#" class="btn btn-default"
11 role="button">Button</a></p>
12       </div>
13     </div>
14   </div>
15 </div>
```

If you add more divs with columns, it will give:

See if you can figure out the rest of the code without comments.

Exercises

Exercise 1

Refer to the previously created webpage which includes a Bootstrap navigation bar and a jumbotron. Add four cards with whichever pictures you'd like, with whatever content you'd like.
