4. Bootstrap Alerts
http://getbootstrap.com/components/#alerts

Bootstrap alerts are essentially popups you get when something good, or alternatively, bad happens. They can pop up with a little bit of Javascript magic (which we won't get into - yet), or they can stay there as an aesthetics piece in your webpage.

```
1    <div class="alert alert-success" role="alert">...</div>
2    <div class="alert alert-info" role="alert">...</div>
3    <div class="alert alert-warning" role="alert">...</div>
4    <div class="alert alert-danger" role="alert">...</div>
```

...will give:

Well done! You successfully read this important alert message.

Heads up! This alert needs your attention, but it's not super important.

Warning! Better check yourself, you're not looking too good.

Oh snap! Change a few things up and try submitting again.

Without the text, of course.

You can put many things within these alerts.

```
1    <div class="alert alert-success" role="alert">
2      <p><b>Well done!</b> You successfully read
3      <a href="#" class="alert-link">this important alert
4    message</a>.</p>
     </div>
```

Will give:

Well done! You successfully read **this important alert message**.

Where "this important alert message" is linked to another URL.

Exercises	
Exercise 1	Add an alert to the top of your replicated webpage.
